

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A display apparatus comprising:

a panel substrate provided with light emitting devices and driving electrodes for driving said light emitting devices, said light emitting devices ~~and said driving electrodes forming~~ being formed in a light emitting region and electrodes extending into an electrode region;
[[and]]

a sealing substrate adhered to said panel substrate through a sealing resin such that there is substantially no void between the panel substrate and the sealing substrate in the light-emitting region of the device; wherein

said sealing substrate is provided with a relief portion ~~for said sealing resin at its portion opposed to the outside of said light emitting region~~ between the light emitting region and the electrode region in the condition of being adhered to said panel substrate wherein the sealing resin extends into the relief portion and the relief portion prevents resin from flowing into the electrode region.

2. (Currently Amended) A display apparatus as set forth in claim 1, wherein said relief portion ~~for said sealing resin~~ is comprised of ~~a groove~~ one or more grooves.

3. (Currently Amended) A display apparatus as set forth in claim 1, wherein said relief portion ~~for said sealing resin~~ is comprised of a plurality of holes.

4. (Currently Amended) A display apparatus as set forth in claim 1, wherein said relief portion for said sealing resin is comprised of a rough surface ~~formed in a surface of said sealing substrate~~.

5. (Currently Amended) A method of manufacturing a display apparatus comprising a panel substrate provided with light emitting devices and driving electrodes for driving said light emitting devices, said light emitting devices being located at ~~and said driving electrodes forming a~~ light emitting region and wherein electrodes extend into an electrode region, and a sealing substrate adhered to said panel substrate through a sealing resin wherein the sealing resin substantially fills a void between the panel substrate and the sealing substrate in the light-emitting region of the device, said method comprising the step of:

providing said sealing substrate with a relief portion ~~for said sealing resin at that portion of said sealing substrate which is opposed to the outside of said light emitting at positions between the light emitting region and the electrode region~~ in the condition where said sealing substrate is adhered to said panel substrate, wherein the sealing resin extends into the relief portion and the relief portion prevents resin from flowing into the electrode region.

6. (Currently Amended) A method of manufacturing a display apparatus as set forth in claim 5, wherein said relief portion ~~for said sealing resin~~ is comprised of a ~~groove~~ one or more grooves.

7. (Currently Amended) A method of manufacturing a display apparatus as set forth in claim 5, wherein said relief portion ~~for said sealing resin~~ is comprised of a plurality of holes.

8. (Currently Amended) A method of manufacturing a display apparatus as set forth in claim 5, wherein said relief portion ~~for said sealing resin~~ is formed by roughening a surface of said sealing substrate.

Please add the following new claims:

9. (New) A display apparatus as set forth in claims 2 or 3, wherein the relief portion is formed in a first surface of the sealing substrate such that the relief portion does not reach the opposing second surface of the sealing substrate.

10. (New) A method of manufacturing a display apparatus as set forth in claims 6 or 7, wherein the relief portion is formed in a first surface of the sealing substrate such that the relief portion does not reach the opposing second surface of the sealing substrate.
